

How to Set Up Your KILT Identity in the Sporran Wallet

Start by going to the [Sporran](https://sporran.org) website. The Sporran wallet was developed by B.T.E. BOTLabs Trusted Entity GmbH, a subsidiary of BOTLabs GmbH, the entity that initially developed KILT Protocol.

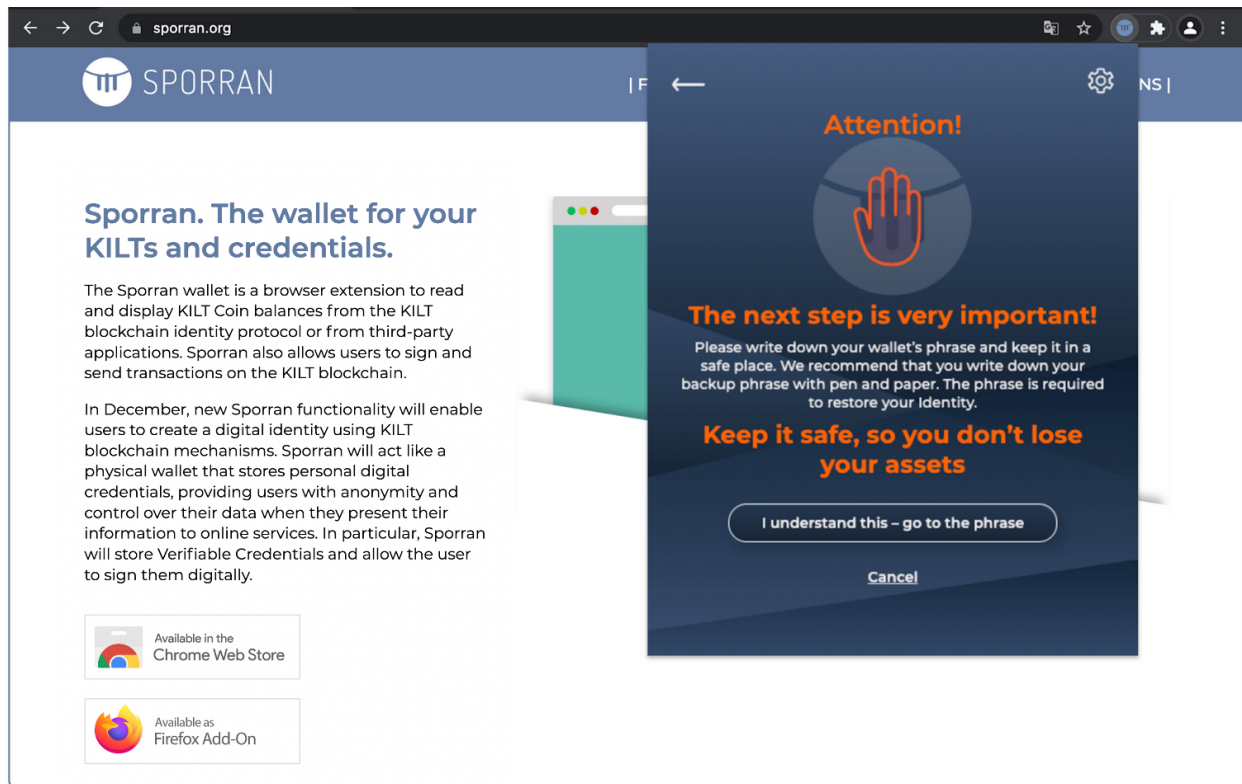

We recommend closing all other browser tabs before you begin this process.

Read through the Sporran [Terms and Conditions](#), including the section on the importance of keeping your passphrase safely! If you agree, download the free browser extension from [Google Chrome](#) or [Firefox](#).

When you open the extension, accept the Terms and Conditions. If you have already set up a Sporran account on another device, you can import it by clicking “Import identity from pre-existing phrase.” Otherwise, click “Create Identity” to set up a new account.

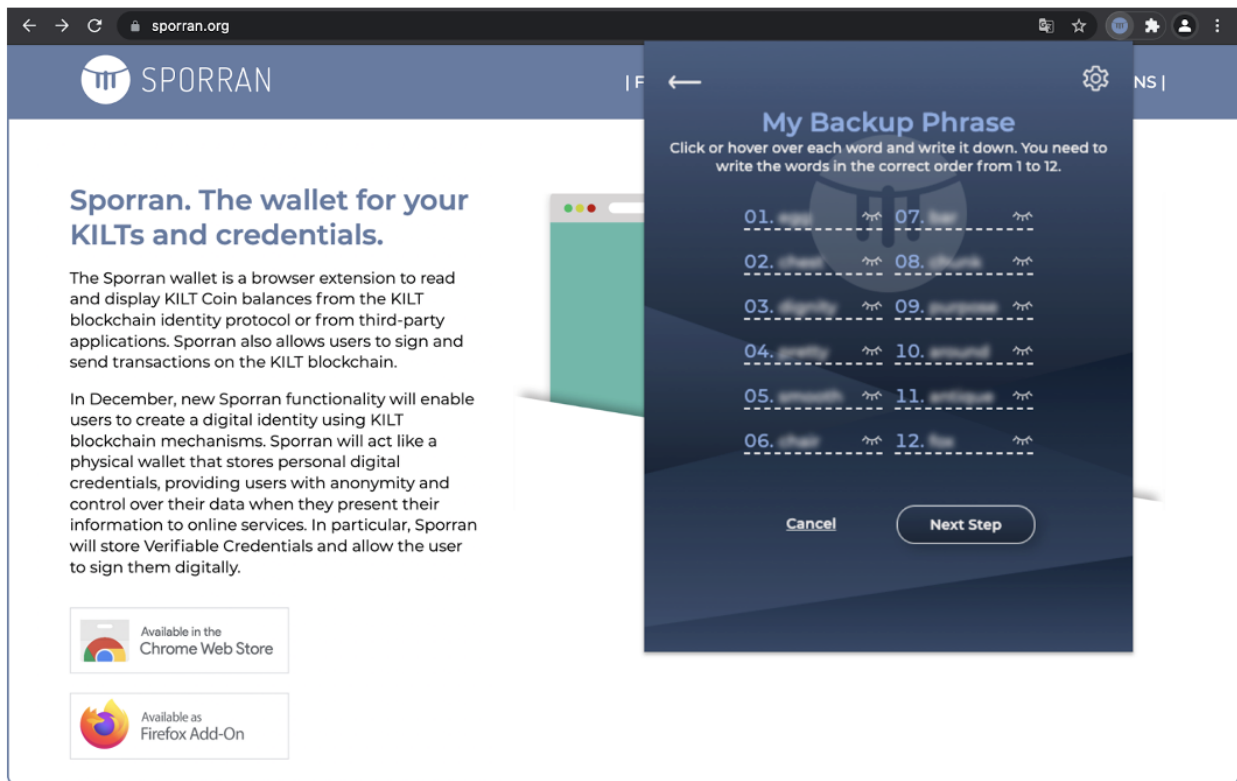

The next step is so important it gets its own pop-up!

It is vital to write down the backup phrase you will receive and keep it in a safe place. It is highly recommended **not** to take a screenshot or store it on your computer. Instead write it down with a pen and paper and store it safely, where you can remember where it is, and where no one else has access to it!

In the decentralized world, you are the only person with access to your passphrase and password. Neither KILT nor the Sporrان have any access to them. Therefore, losing your passphrase and/or password will result in losing access to the Sporrان wallet.

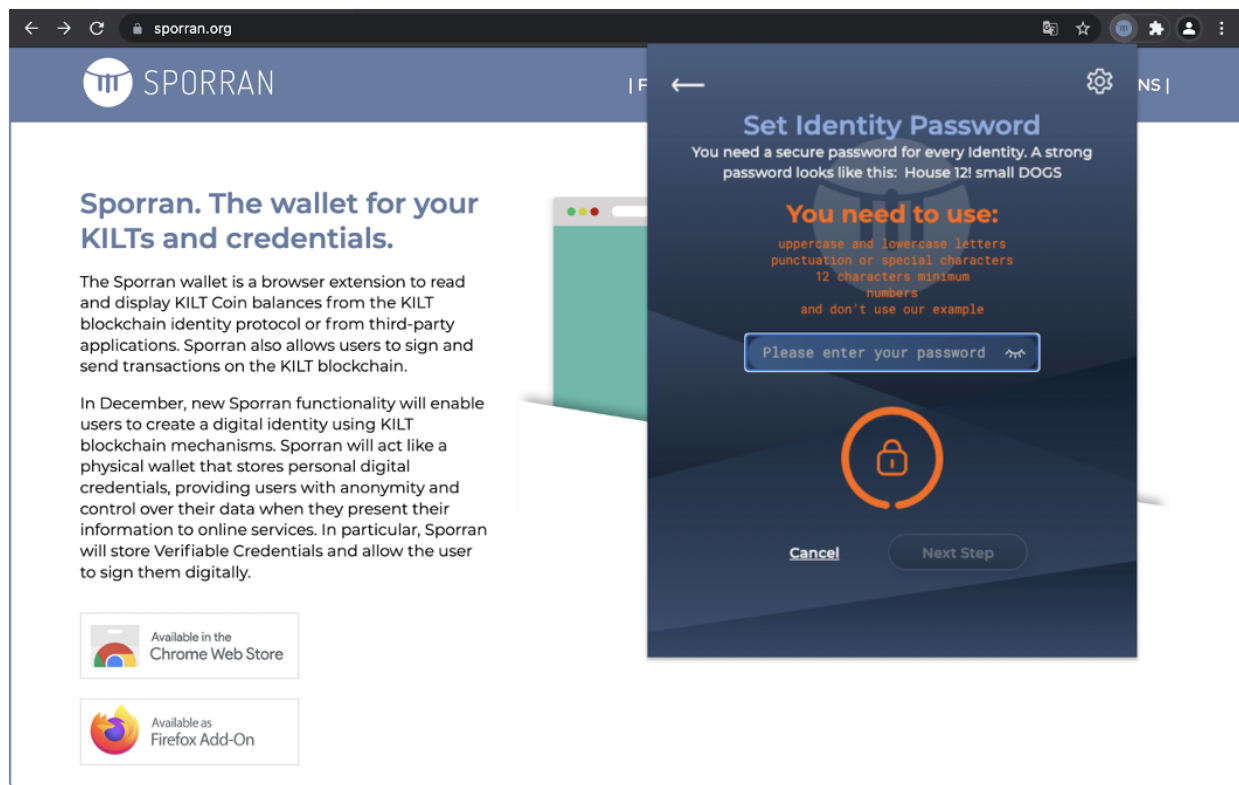

When you are ready to store your wallet phrase safely, click "I understand this – go to the phrase".

Click or hover your mouse over each of the 12 words and write them down in the correct order.

Write your backup phrase and password down and store them safely where you can remember where they are, and where no one else has access to them. Then click “Next Step”.

The next pop-up will present your 12 words. Click on each in the correct order to add them to the box. When correct, click “Next Step”.

Create a strong password for your Identity using upper and lowercase letters, punctuation, numbers and special characters, with a minimum of 12 characters. To see what you have typed, click the eyelashes on the right.

When you are happy with your password, click “Next Step”.

Congratulations – you’ve successfully created your KILT Identity!

Any questions? Learn more about Sporrان and other KILT-related services on our [Tech Support](#) site.
